

Supplemental Aid:

MATH NUMBER CHART

Supplemental aids are paper-based resources that assist students in recalling information. Supplemental aids should be chosen based on the student's needs and used consistently in instruction and assessment. Start with providing a completed version of the number chart that highlights important numbers during instruction. Guide the student with prompts (verbal, written, visual) while they practice the new skill. As the student becomes more proficient, use increasingly complex examples for them to solve. When the student has mastered more challenging problems with the completed number chart, slowly remove guides that indicate important numbers. Continue this process until the student can routinely, independently, and effectively solve problems using the blank number chart. At this stage, the student is ready to use the blank number chart as an allowable supplemental aid on the state assessment.
